Library Assignment

After eons of reflection, your client Mike has finally narrowed down six of his favorite novels in the public domain. Now, he wants to make these masterpieces known to the world with a personal website. Alas, Mike has no concept of programming, and the most he can do for you is provide six .txt files he pulled from Project Gutenberg.

Create an Express server with Node that delivers the six .txt files provided in this folder. When running the server locally on your machine at port 3000, you should be able to access the individual .txt files with the following URLs:

1. localhost:3000/ageofinnocence should return ageofinnocence.txt
2. localhost:3000/annakarenina should return annakarenina.txt
3. localhost:3000/candide should return candide.txt
4. localhost:3000/janeeyre should return janeeyre.txt
5. localhost:3000/karamazov should return karamazov.txt
6. localhost:3000/northangerabbey should return northangerabbey.txt
